

UEE Enterprise Specification v2.0

UEE ENTERPRISE SPECIFICATION v2.0

1. EXECUTIVE SUMMARY

UEE (Universal Evolution Engine) is an AI-native enterprise operating system that unifies strategy, architecture, product management, data, technology, governance, risk, AI, and value realization into a continuous evolution cycle.

2. BUSINESS REQUIREMENTS

- Strategy-to-execution traceability
- Enterprise knowledge management
- Portfolio and product governance
- AI-assisted decision intelligence
- Continuous capability evolution
- Value realization measurement

3. PRODUCT REQUIREMENTS

Modules:

- Executive Copilot
- Strategy Workspace
- Portfolio Management
- Enterprise Architecture Repository
- Knowledge Graph Explorer
- Traceability Explorer
- Agent Studio
- Learning Academy
- Governance Hub
- Value Realization Dashboard

4. CONCEPT OF OPERATIONS (ConOps)

Actors:

- Executives
- Architects
- Product Managers
- Engineers
- Data Teams
- Governance Teams

Workflow:

Strategy → Objectives → Capabilities → Products → Applications → Data → Outcomes

5. ENTERPRISE ONTOLOGY

Entities:

Strategy, Objective, Initiative, Capability, Value Stream,
Product, Service, Application, API, Data Product,
Technology, Risk, Control, Metric, Team.

6. KNOWLEDGE GRAPH

Relationships:

Objective REALIZED_BY Capability

Capability ENABLED_BY Product

Product SUPPORTED_BY Application

Application USES API

API PRODUCES Data Product

Data Product ENABLES Metric

7. AGENT SOCIETY

Executive Copilot

Strategy Agent

Portfolio Agent

Product Agent

Architecture Agent

Data Agent

Security Agent

Governance Agent

FinOps Agent

Learning Agent

Evolution Agent

8. AGENT INTERACTION MODEL

Planner → Specialist Agents → Knowledge Graph → Synthesis Agent → Executive Response

9. REFERENCE ARCHITECTURE

Strategy Architecture

Business Architecture

Capability Architecture

Product Architecture

Data Architecture

Application Architecture

Technology Architecture

Security Architecture

Governance Architecture

AI Architecture

10. TECHNOLOGY STACK

Frontend:

Next.js, React, TypeScript, Tailwind

Backend:

Node.js, Python

AI:

Anthropic Claude

LangGraph

Data:

PostgreSQL

Neo4j

pgvector

Infrastructure:

Vercel

Kubernetes

AWS/Azure/GCP

11. API DOMAINS

Strategy API

Portfolio API

Architecture API

Knowledge Graph API

Agent API

Governance API

12. SECURITY

Zero Trust

RBAC

ABAC

Encryption

Audit Logging

AI Governance Controls

13. VALUE REALIZATION

Metrics:

Revenue

Cost Reduction

Risk Reduction

Productivity

Innovation

Customer Outcomes

14. KPI FRAMEWORK

Strategic Alignment

Architecture Compliance

Delivery Performance

AI Adoption

Knowledge Reuse

15. IMPLEMENTATION ROADMAP

Phase 1 Discovery

Phase 2 Foundation

Phase 3 MVP

Phase 4 Pilot

Phase 5 Scale

Phase 6 Enterprise Rollout

Phase 7 Autonomous Evolution

16. RESOURCE MODEL

Enterprise Architects

Product Managers

AI Engineers

Software Engineers

Data Engineers

Platform Engineers

Security Engineers

Change Managers

17. LEARNING ACADEMY

Strategy Track

Architecture Track

Product Track

Data Track

AI Track

Leadership Track

18. DELIVERABLES

BRD

PRD

ConOps

Operating Model

Reference Architecture

Knowledge Graph Schema

Agent Specifications

Roadmap

Cost Model

KPI Framework

19. TARGET STATE

A continuously learning enterprise capable of autonomous improvement and measurable value creation.

20. FINAL EVOLUTION QUESTION

What is the next better version of this enterprise?
